Defining a Remote Site in Dreamweaver

After you define a local site in Dreamweaver, you can define the remote. The remote site is where you copy the pages once complete. In this example, we will define a remote site for use with the Andrew Web Publishing System (AWPS).

- 1. In the Category list on the left, select **Remote Info**.
- 2. From the Access pop-up menu, select FTP.
- 3. Enter the following information:

FTP Host: publishing.andrew.cmu.edu Host Directory: your Collection Name Login: your Andrew userid Password: your Andrew password

Note: Make sure to select the Use Secure FTP (SFTP) check box.

sic Advanced	
Category	Remote Info
.ocal Info Remote Info Festing Server Cloaking Design Notes Site Map Layout File View Columns Contribute	Access: FTP FTP host: publishing.andrew.cmu.edu Host directory: CollectionName Login: AndrewID Test Password: ••••••••••••••••••••••••••••••••••••

4. Select the **OK** button, then **Done**. Your web files will appear in the **Files** panel.

Note: Once your site is defined, switch to Local view. Local view is where you edit your web pages. To view your local files select the **Files** panel and choose **Local** view from the drop-down menu.
